## Please RSVP to:

**Robert Sperry  
rsperry@iastate.edu**

- **Project Description**
- **Safety Edge Overview**
- **Provided Lunch**
- **Site Visit \***

*\* weather permitting*

The Safety Edge is created by a custom pan installed on the paver to create a 30-degree consolidated wedge.

At minimal additional cost, the Safety Edge provides a roadway edge that allows errant vehicles to return to the roadway safely. A stronger transition with the graded material can also reduce the level of maintenance required.
